

COLUMN DISTILLATION

A distillation column is an essential item used in the distillation of liquid mixtures to separate the mixture into its component parts, or fractions, based on the differences in volatilities. Fractionating columns are used in small scale laboratory distillations as well as large scale industrial distillations.

Column, Distilling, Hemple

- ▶ Plain distillation column with a row of indentations to assist column packing material
- ▶ Column length indexed is for the straight component above the row of indentations and under the joint
- ▶ Column has a standard taper top outer and lower internal joint

Catalog No.	Joint Size	Tube O.D. x Length	Pack Type

Column, Distilling, Vigreux

- ▶ A type of air condenser where the simple tube has been modified to include an abundance of downward-pointing indentations - this increases the surface area per unit length of the condenser
- ▶ Column length is measured from the highest to the lowest indent in the column.
